The Annual Energy Outlook 2006 presents a forecast and analysis of US energy supply, demand, and prices through 2030. The projections are based on results from the Energy Information Administration's National Energy Modeling System. The AEO2006 includes the reference case, additional cases examining energy markets, and complete documentation.

Just wanted to give everyone a heads-up that it was out: ([link](#)). (and here's a [link to the general forecasting page](#) which links to this report...). I am betting we'll be talking about this over the next few days...
