As of August 19 (the most recent data available), U.S. commercial crude oil inventories were well above the average range for this time of year. *However, gasoline inventories were at the lower end of the average range, and with demand growing at a 1.6 percent rate over the most recent 4-week period, in terms of the amount of days gasoline inventories would supply, they are very low.* Distillate inventories remain above the average range for this time of year. Inventory data as of August 26 will be available at 10:30 am ET on Wednesday, August 31.
