

## The ASPO Plot - Jean Laherrerre replies

Posted by [Heading Out](#) on September 12, 2005 - 8:25pm

Topic: [Supply/Production](#)

Jean Laherrerre is one of the major figures who have contributed to the understanding of Peak Oil over the years. He usually provides the more detailed analyses that are given at meetings (such as the one he gave in Lisbon recently). He replies on the discussion relating to Rembrandt's piece:

Subject: Re: [energyresources] New study on peak oil

Date: Sat, 10 Sep 2005 18:50:05 +0200

dear Murray

Koppelaar has a peak around 2015 as [has] my model (no demand constraint), but his peak is higher and his decline steeper as you can see on the comparison.

I do not deal on [single] projects as Chris as I do not have the data, furthermore to get the world total, adding each individual project should be done with a probability ratio for each to be on time.

I am a retired geologist in the country with just access to the technical field reserves and I have three papers to finish before the end of the month, one for presentation to the CERN in Geneva

best regards

jean
