

New search capabilities for The Oil Drum

Posted by [Super G](#) on February 28, 2010 - 8:30pm

Topic: [Site news](#)

Many readers (and staff) of The Oil Drum have pointed out that it is difficult to find older Oil Drum content. Up until now, readers have had two ways to find older content: using [Google site search](#) or looking up by date using the [archives page](#). We now offer a new way to search using an [Apache Solr](#) search engine hosted by [Acquia](#). Solr search, unlike Google, enables you to sort and filter results. You can try it out by entering your search terms in the "Advanced search" box to the left, or by going [here](#). Feedback is welcome.

Thanks to André Angelantoni for advice and encouragement.
