Last week, Prof. Goose [told you](#) about This Week in Energy, a world-reaching, web-based weekly (and archived) energy-focused show, that we are working with.

This week the show featured [David Murphy](#) of our staff. Dave has an M.S. in Environmental Science and is currently a Ph.D. candidate in the same field at the State University of New York - College of Environmental Science and Forestry. Current research initiatives include Energy Return on Investment (EROI) analysis, studying the interface of energy and economics, and applying econometric time-series analyses to energy/economic issues.

In [this week's show](#), Dave talks to hosts Nikki Gordon-Bloomfield and Bob Tregilus about a number of topics including

- The offloading of research to universities, instead of companies having their own R&D departments
- China's passing the US in wind and solar investment
- Obama's announcement on offshore drilling
- The decline in popularity of cap and trade

The show is available either as a [video](#) or as a [podcast](#). It is Episode 18, if you are downloading the [podcast](#).

- Obama's announcement on offshore drilling
- The decline in popularity of cap and trade

The show is available either as a [video](#) or as a [podcast](#). It is Episode 18, if you are downloading the [podcast](#).

Art Berman was on the show a week ago, talking about L/CNG, the natural gas business, peak oil, and all sorts of other related topics. If you missed it, it can be viewed [here](#) as a video, or downloaded as a [podcast](#) (Episode 17). The video quality is low on last week's show because of technical difficulties, but otherwise it is fine.

The TWiEpodcast streams live each Wednesday at 17:00 UTC (10:00am PDT & 1:00pm EDT) and runs for 90 minutes. Here is the link if you want to watch it live and/or participate in the live chat: [Watch Live](#).
