[Farewinds associates video](#)

Arnie Gundersen discusses spent fuel pool in unit 4, providing video evidence that the pool is not full and fuel is exposed. 5 minute video.

[SRS pump will head to Japan](#)

"Our understanding is, they are preparing to go to next phase and it will require a lot of concrete," Ashmore said, noting that the 70-meter pump can move 210 cubic yards of concrete per hour.

[Concrete pumps to Fukushima](#)

Four more concrete pumping trucks are on their way to the Fukushima Daiichi nuclear power plant to help the effort to maintain fuel ponds.

[Tepco's plans for water issues](#)

To tackle the discharges Tokyo Electric Power Company plans to construct a 6000 tonne water tank as well as a 4000 tonne pond. These will work in conjunction with a 20 tonne per hour treatment facility to handle water from drainage canals around all six reactors at the plant.
