Each year, ExxonMobil publishes its view of the long-term trends of worldwide economic growth and energy demand: The Outlook for Energy. In the newly-released 2005 version, the energy giant's basic conclusion--that through the year 2030, traditional fossil fuels will continue to supply the vast majority of energy needs--remains the same, although the mix and sources are adjusted slightly.

Lots of good stuff from Mike over at GCC...([link](#))
